global sustainable risk control

e-Learning system

Background

Imagine a future where learning can be done from the convenience of your own office or home. Imagine doing courses at your pace and at your own convenient time. Imagine getting your proof of success at the click of a button and printing it at your desk.

Well, imagine no more, because at GSRC Management we have the ability to make the future happen now with our class leading e Learning System which brings first world benefits that save your company real costs.

Introducing the GSRC e-Learning system

e-Learning is not new, but with the cost of infrastructure in Africa at a premium and prospective users not always computer literate, the market for these systems in Africa has been problematic to say the least.

Until now, that is. With GSRC Managements e-Learning System we can provide a quality system that is aimed directly at senior level staff who have the infrastructure and the requisite skills and knowledge to be able to make use of future technology today.

We have developed a range of courses that are suitable for the e-Learning platform but none are as beneficial to the user as the SHE Inductions. In the past, inductions would require the individual to attend a classroom based program that was intended for all levels of personnel. This could mean that the person would be held up by others during the training leading to frustration and negativity. Being away from the operational environment added anxiety to the person in a leader's position because he would not be able to attend to all problems immediately.

Coupled to the fact that the person must perhaps travel to the facility and spend time on registration, photos and printing of cards, safety inductions often mean a substantial amount of time away from the job that a person is paid to do, driving up costs and driving down efficiencies.

Now selected personnel can easily and quickly complete a thorough and accurate induction in less than half the time of traditional systems through their own desktop PC, Laptop or even Tablet device when required. Furthermore these inductions can be done after hours or away from the office whilst travelling, adding to its ease of use and convenience.

All that a person needs is an internet connection, log in details, a PC or laptop equipped with office programs, a camera and a colour printer for this dream to become reality.
